
COCONUT FIBER

PRODUCT CODE – PTS/CF/001

Overview

Coconut Fiber is a product, which is extracted from the outer shell (husk) of the coconut using a fiber extraction system. It has high lignin content and thus low cellulose content, as a result of which it is resilient, strong and highly durable. It is popular for rope making and matting. Coconut fiber can also be used to make twine, doormats and brushes.

Specifications

- General
 - ✓ Color – Golden Brown
- Analytical
 - ✓ Moisture: < 15%
 - ✓ Impurities: < 4%
 - ✓ Fibre Length: 5-25 cm

Packaging

- ✓ 120-150 kg bales
- ✓ Loadability – 22 MT per 40' HC

ADDRESS

PT SARASWATI
Menara Batavia, Lt. 14
Jl. KH. Mas Mansyur
Kav. 126 Karet Tengsin,
Tanah Abang, Jakarta Pusat
(62) 21-572-3753, 21-572-7401

COUNTRY OF ORIGIN

Indonesia

METHOD OF PRODUCTION

Fiber is produced by beating coconut husks in a fiber extraction system which separates the fiber from the coco pith. The fiber output is screened, dried and converted to 120 kg bales for shipping.
